In or election requirement. Inition purposes. 37 C.F.R. 1.84 these draw approved by the (see explanation).

This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required at such time as allowable subject matter is indicated.

Claims 1-3 and 7 are provisionally rejected under 35USC101 as claiming the same invention as that of claims 1 and 2 of copending application Serial No. 07/665,528.

This is a provisional double patenting rejection since the conflicting claims have not, in fact, been patented.

The differences in the claims are viewed as only semantical in nature and not substantive.

Claims 4-6 are provisionally rejected under the judicially created doctrine of obviousness-type double evec-patenting as being unpatentable of claims 1 and 2 of copending application Serial No. 07/665,528.

This is a <u>provisional</u> obviousness-type double patenting rejection.

The claims set forth only the functional operational environment of the invention and official notice is taken that choice of environment would have been well known and obvious in the file transfer art.

Relative to the doctrine of official notice, see In re Fox, 176 U.S.P.Q. 340 at 341 (CCPA-1973).

The references are cited as of interest.

Claims 8-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

PATENT STATUTES

TITLE 35 U.S. CODE

Inventions patentable

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Section:

101.

102. Conditions for patentability; novelty and loss of right to patent

A person shall be entitled to a patent unless—

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for patent, or (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of the application for patent in the United States, or (c) he has abandoned the invention, or (d) the invention was first patented or caused to be patented, or was the subject of an inventor's certificate, by the applicant or his legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filled more than twelve months before the filling of the application in the United States, or (e) the invention was described in a patent granted on an application for patent by another filled in the United States before the invention thereof by the applicant, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this stitle before the invention thereof by the applicant or patent, or (f) he did not himself invent the subject matter sought to be patented, or (f) he did not himself invent the subject matter sought to be patented, or

of the did not himself invent the subject matter sought to be patented, or the applicant's invention thereof the invention was made in this country by another who had not abandoned, suppressed or concealed it. In determining priority of invention there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other.

Conditions for patentability; non-obvious subject

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made. Subject matter developed by another person, which qualifies as prior art only under subsection (f) and (g) of section 102 of this title, shall not preclude matter and the claimed invention were at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

112. Specification

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected to make and use the same, and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The specification shall conclude with one or more claims particularly pointing fout and distinctly claiming the subject matter which the applicant regards as his invention.

A claim may be written in independent or, if the nature of the case admits, in dependent or multiple dependent form.

Subject to the following paragraph, a claim in dependent form shall contain a reference ato a claim previously set forth and then specify a further limitation of the subject matter claimed. A claim in dependent form shall be construed to incorporate by reference all the limitations of the claim to which it refers.

A claim in multiple dependent form shall contain a reference, in the alternative only, to more than one claim previously set forth and then specify a further limitation of the subject matter claimed. A multiple dependent claim shall not serve as a basis for any other multiple dependent claim shall not serve as a basis for any other multiple dependent claim shall not serve as a basis for any other multiple dependent claim in relation to which it is being considered.

An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material, or acts
